

How webservers used to play chess

How NGINX plays chess

How NGINX plays lots of chess

NGINX innovations

Asynchronous
event loop

does more
with less

Multi-process
architecture

for near-
linear CPU
scaling

Configuration reload
without interruption

Web server developers: market share of all sites

© Netcraft, August 2021

2001: genesis

2004: nginx-0.1 ^T

2011: nginx-1.0 ^Z

2019: No.1 server

Evolution of reverse proxy to service proxy

Load Balancer

Apache

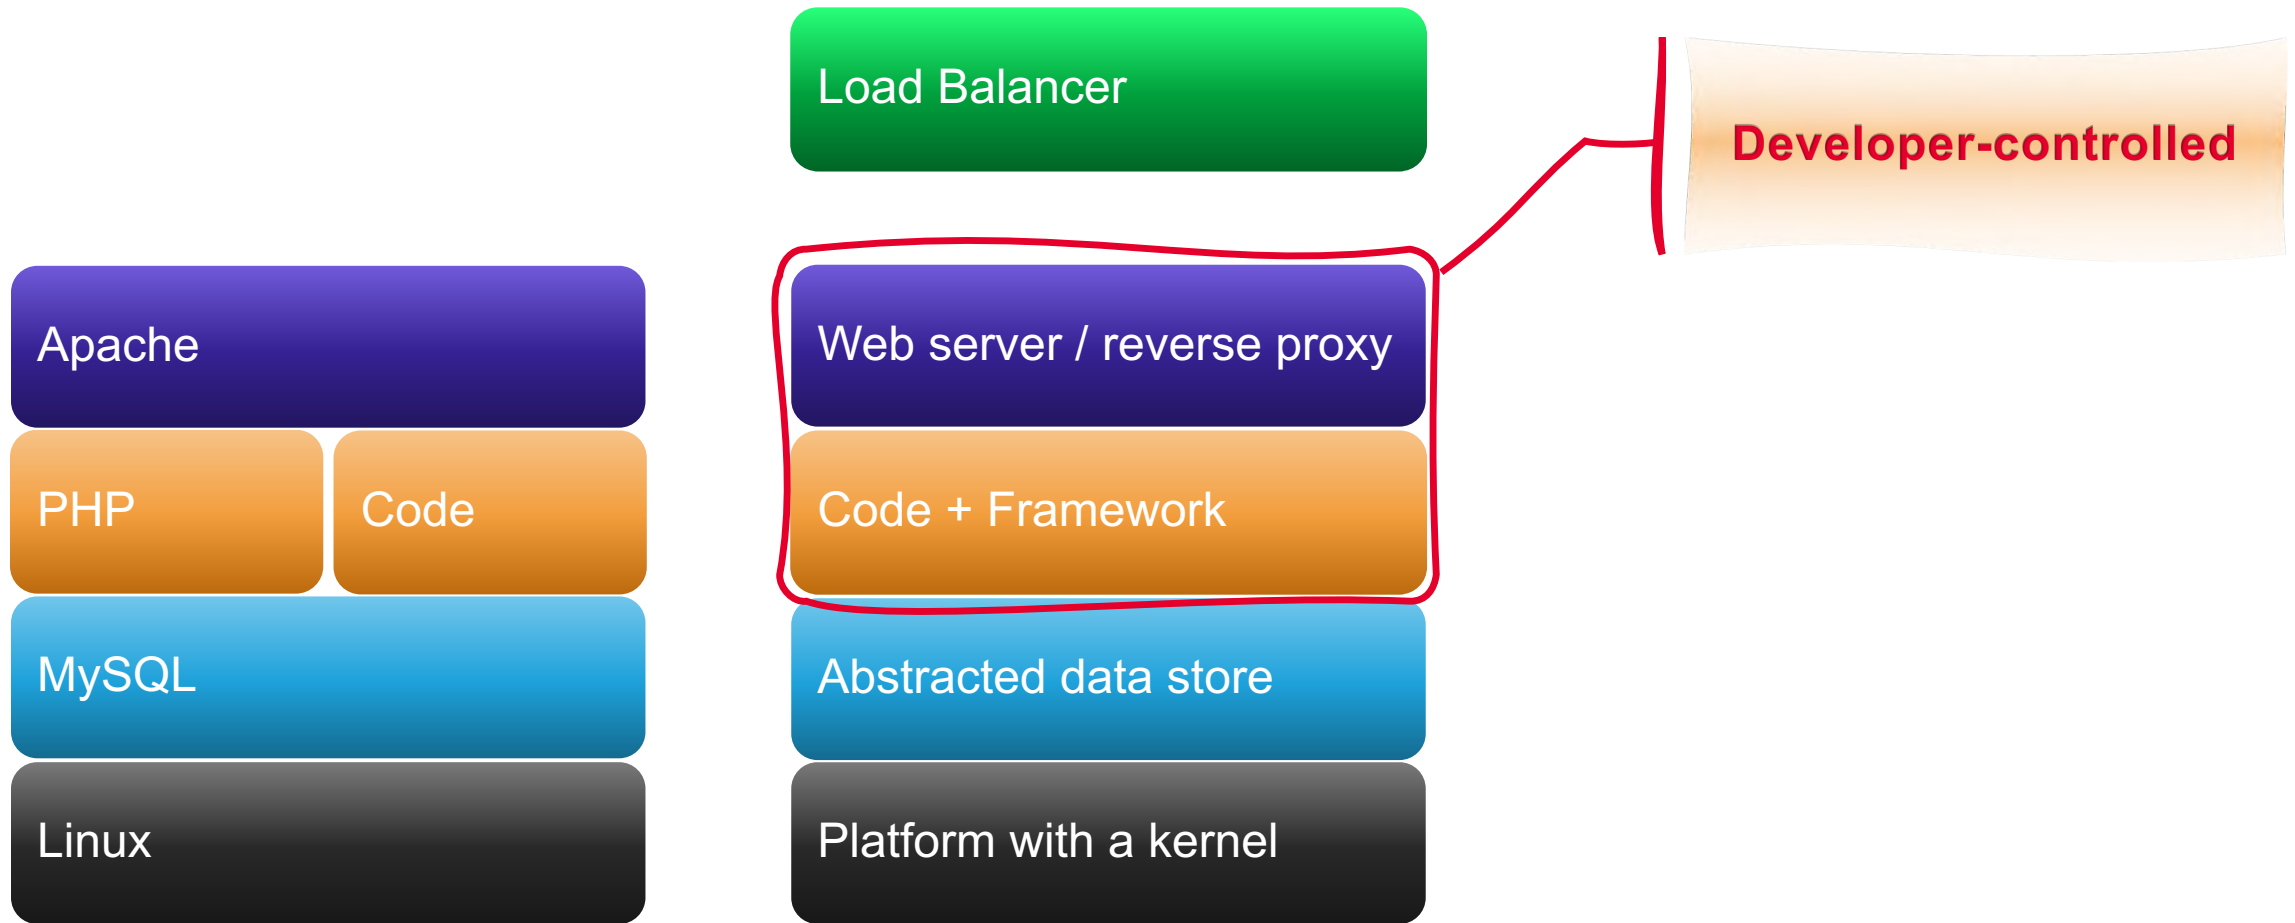

PHP

Code

MySQL

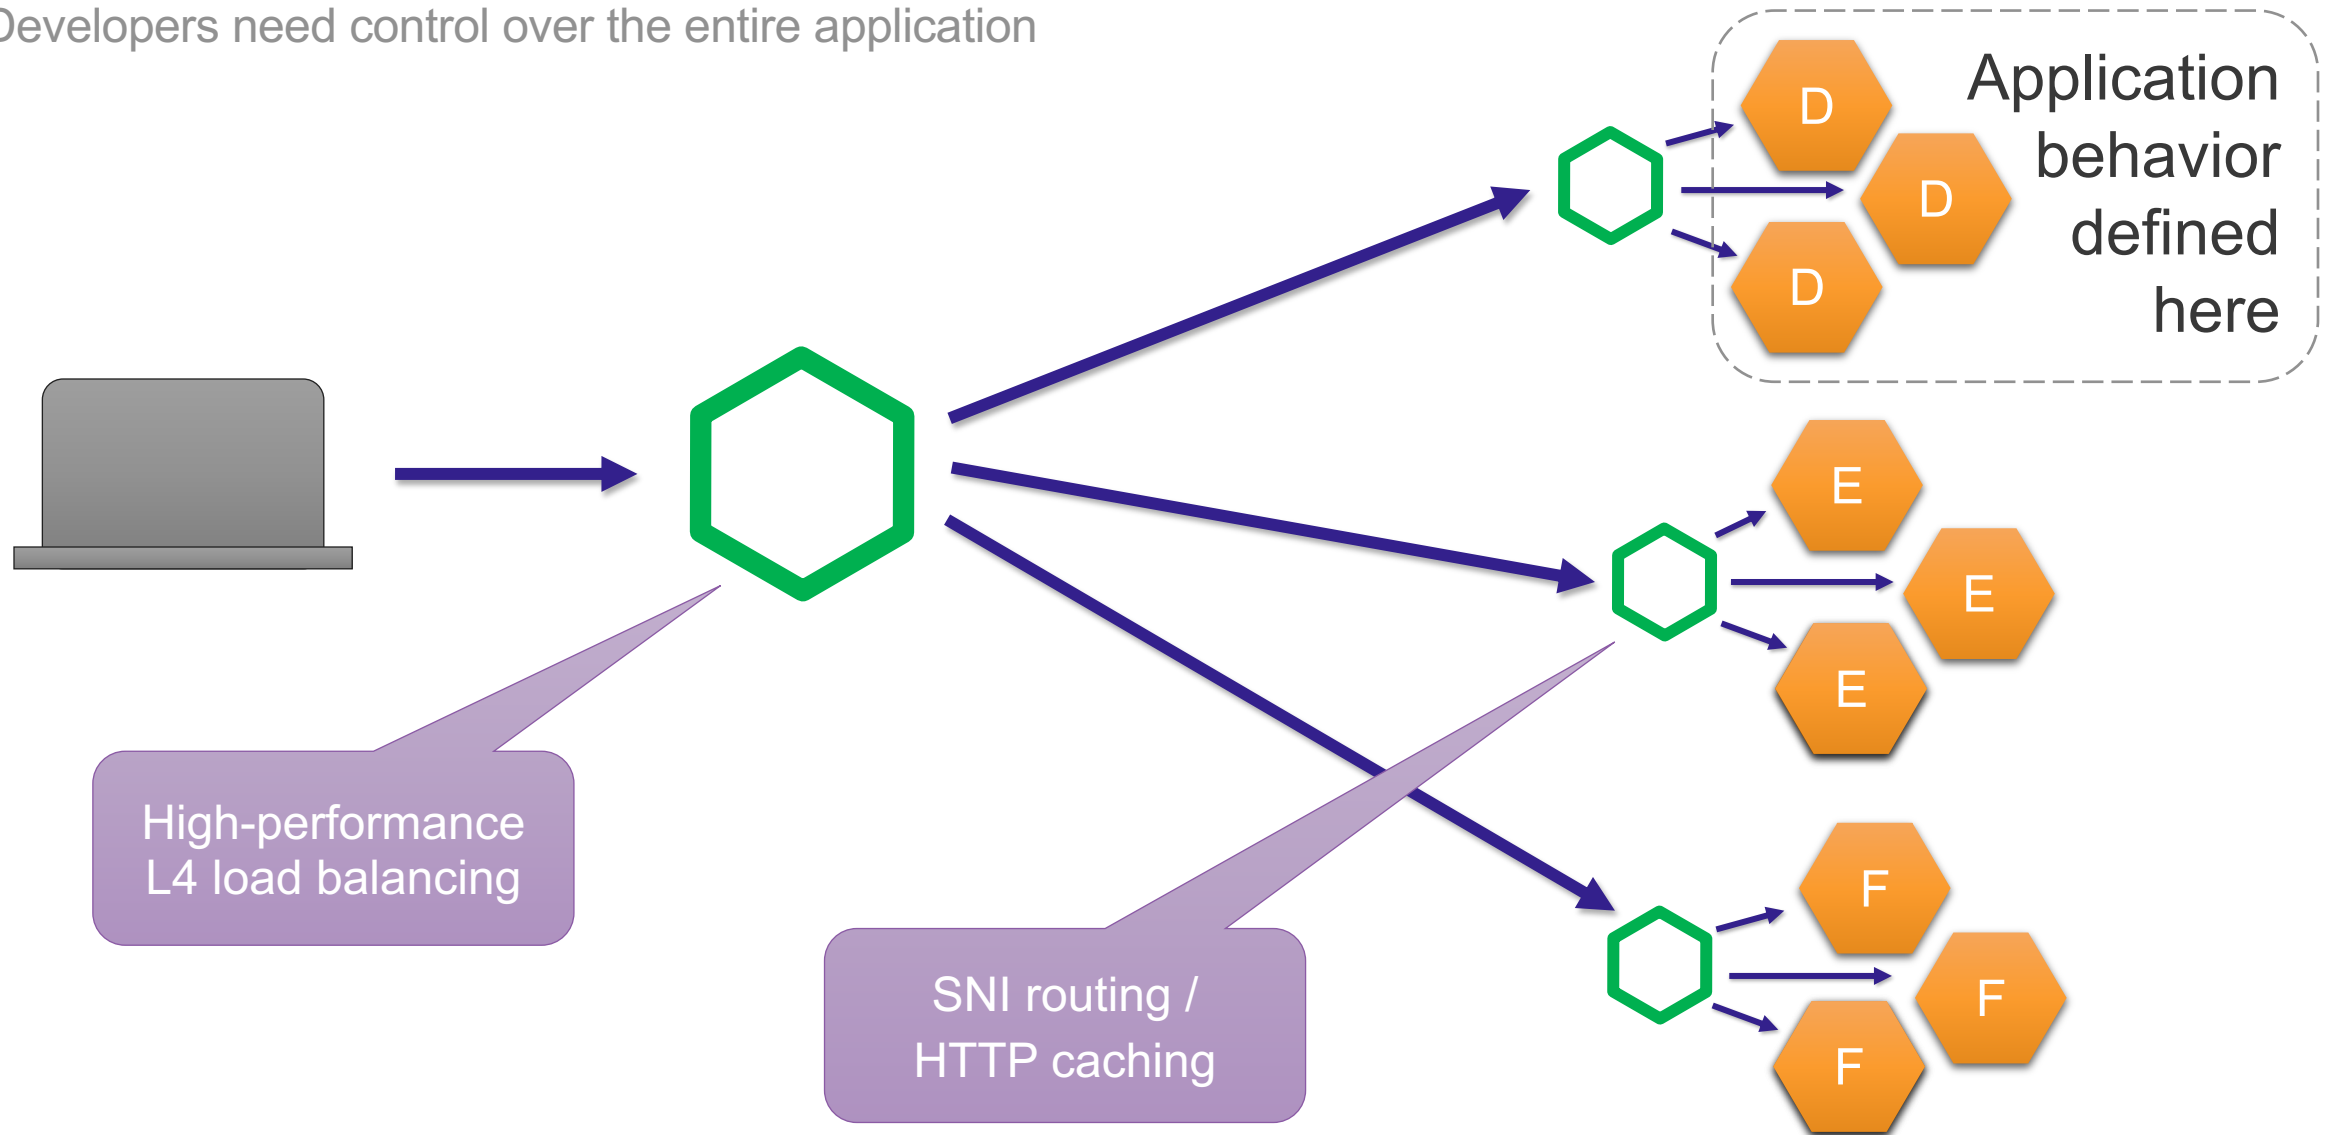

Linux

Evolution of reverse proxy to service proxy

Eradicating the service proxy

Developers need control over the entire application

How Unit was born

- Unit story begins half way along the NGINX timeline
 - Igor started experimenting with some ideas for "NGINX v2"
 - Sep-2015: Separate initiative to treat static and dynamic content equally: running PHP, Python, Ruby apps without a separate process manager
 - These ideas combine!
- Jul-2016: Initial prototype on a new codebase
- Sep-2017: First public release (v0.1) [Apache 2 license]
- Apr-2018: v1.0
